3. The following is an examiner's statement of reasons for allowance: With respect to the independent claims identified above, prior art fails to teach or fairly suggest a wireless communication function equipped sensor having a receiver and transmitter, and further comprises a power control device which supplies the electric power charged by said electric power charging device to said load devices, wherein said load devices

are activated when the electric power charged by said electric power charging device reaches a level sufficient to activate said load devices. In addition, the prior art fails to teach or fairly suggest a wireless communication function equipped sensor which comprises and electric power generator which starts generating electricity in response to an output of an environment generating device for applying generating conditions predicted as the environment during generation of electricity. It should further be noted that the prior art fails to teach such a sensing system wherein said wireless transmitting device transmits wireless signals to said wireless communication device by a communications method different from that of said wireless receiving device, such as UWB, AM, FM, and/or infrared.
